CONTENTS

Preface 1

INVITED PAPERS

C.T.H. BAKER and M.S. DERAKHSHAN
FFT techniques in the numerical solution of convolution equations 5

M. CROUZEIX
On multistep approximation of semigroups in Banach spaces 25

A. HADJIDIMOS
A survey of the iterative methods for the solution of linear systems by extrapolation, relaxation and other techniques 37

P.J. ROUSSEEUW
Silhouettes: a graphical aid to the interpretation and validation of cluster analysis 53

J.F.B.M. KRAAIJEVANGER, H.W.J. LENFERINK and M.N. SPIJKER
Stepsize restrictions for stability in the numerical solution of ordinary and partial differential equations 67

Z. ZLATEV
A survey of the advances in the exploitation of the sparsity in the solution of large problems 83

CONTRIBUTED PAPERS

S. AMINI
An iterative method for the boundary element solution of the exterior acoustic problem 109

J.P.C. BLANC
On a numerical method for calculating state probabilities for queueing systems with more than one waiting line 119

J.E. CASTILLO, S. STEINBERG and P.J. ROACHE
Mathematical aspects of variational grid generation II 127

J.P. COLEMAN
Complex polynomial approximation by the Lanczos τ-method: Dawson's integral 137

R. COOLS and A. HAEGEMANS
Automatic computation of knots and weights of cubature formulae for circular symmetric planar regions 153

F.D. D'ALMEIDA and M.J. RODRIGUES
Is the iterative refinement of eigenelements an expensive technique? 159

M.R. DA SILVA
Numerical treatment of differential equations with the τ-method 167

P. DE GROEN and B. DE MOOR
The fit of a sum of exponentials to noisy data 175

M.O. DEVILLE, E.H. MUND and A.T. PATERA
Iterative solution of isoparametric spectral element eqations by low-order finite element preconditioning 189

E. DICK
Elliptic solution techniques for Euler and Navier–Stokes equations in steady flow 199

V. FACK, G. VANDEN BERGHE and H.E. DE MEYER
Some finite difference methods for computing eigenvalues and eigenvectors of special two-point boundary value problems 211

L. FISHMAN and S.C. WALES
Phase space methods and path integration: the analysis and computation of scalar wave equations 219

J.A. FORD and A.F. SAADALLAH
On the construction of minimisation methods of quasi-Newton type 239

M. GREGUŠ, Jr., Yu. Yu. LOBANOV, O.V. SIDOROVA and E.P. ZHIDKOV
On the deterministic computation of functional integrals in application to quantum mechanical problems 247

J.-Fr. HAKE
The numerical solution of PDE problems with standard software packages 257

W.H. HUNDSDORFER
A note on monotonicity of a Rosenbrock method 267

H.L. JANSSEN
Recursive construction of a sequence of solutions to homogeneous linear partial differential equations with constant coefficients 275

R. KAAS and M.J. GOOVAERTS
A new method for deriving bounds for integrals with respect to measure allowed to vary under conical and integral constraints 289

D.A. KLIP
An analytic approach to the solution of nonlinear equations 299

M.Z. LIU, K. DEKKER and M.N. SPIJKER
Suitability of Runge–Kutta methods 307

C.W. MASTIN
Implicit finite difference methods on composite grids 317

T. MITSUI
A modified version of Urabe's implicit single-step method 325

I. MORET and P.P. OMARI
Iterative solution of integral equations by a quasi-Newton method 333

M.T. NAKAO
Superconvergence of the gradient of Galerkin approximations for elliptic problems 341

N. PAPAMICHAEL, C.A. KOKKINOS and M.K. WARBY
Numerical techniques for conformal mapping onto a rectangle 349

N. PAPAMICHAEL and M.J. SOARES
Cubic and quintic spline-on-spline interpolation 359

L. ROTTIERS and G. DE MEY
Eigenfunction expansion versus the boundary element method for thermal problems in microelectronics 367

K. RUOTSALAINEN
On the boundary element method with mesh refinement on curves with corners 373

J. SPOELSTRA and D.J. VAN WYK
A method of solution for a non-linear diffusion model and for computing the parameters in the model 379

M. SUGIHARA
A class of functions for which the trapezoidal rule gives the exact value of integral over the infinite interval 387

J.H.M. TEN THIJE BOONKKAMP
The odd-even hopscotch pressure correction scheme for the incrompessible Navier–Stokes equations 393

H. WAADELAND
Linear approximations to continued fractions $K(z_n/1)$ 403
